

# Advanced Search 3

## Installation

1. Extract the ZIP file
2. Copy the «blockadvancesearch» folder on your website, into the «modules» folder
3. Login to Prestashop back-office
4. In «Modules» tab, click on «Install» button of «Advanced Search Block»
5. Click on «Configure» for settings

## Configuration

### Parameter Display

- Check one or more categories in which you want the block to appear. By checking \*, the advancedsearch block appear in all active categories. If you do not check anything, the block will be displayed throughout the site.
- «Hooking the hook» allows to choose the position of the search bloc.
- «Custom» allows set the AJAX method (without page refresh)
- «Enable the display of the current selection» allows to display criteria for each search
- «Enable search by step» allows possibility to make structural search
- «Filter the possibilities of research based on the current category» allows users to search only in the active category.
- «Search only on-stock», only allows to view products available for purchase.
- «View blocks with no criterion selectable» shows all criteria without distinction
- «View criteria with no product (not selectable)» show criteria even if there no products
- «Show the number of product in the search block» display the quantity of results by criteria
- «Method to display the hidden criteria» : by mouse-over or click
- «Method to post search» : start search immediately or on submit
- «View images related to the attributes» show the image attributes who match the search
- «Index difference in size for the style tags cloud», allows you to define the font size difference used in the tag cloud display mode.
- «Enable cache for research» save the results of searches for faster display.

**Order and establishment**

In this table are listed all available search criteria. Create new features (Catalog > Features) to add search criteria.

Each criteria can be ordered by drag and drop.

It is possible to set each of them individually :

- On / Off Block : displays this criterion in the Advanced Search side block.
- Multicriteria : can combine different criteria for a research
- Style : sets the input format of research (link, menu, input text, tag cloud or checkbox)
- Hide beyond : limits the number of results displayed by criteria.
- Search per slice : allows you to set tariff levels of research. Separate different levels by commas (eg: 0,300,600,1200)
- Label for slices : slices units
- Width in the top hook : define the width of each criteria in pixel
